

## FIND THE BEST LOCATION FOR YOUR SPA

---

**Finding the best location for your spa or swim spa is important to get the most from it.**

Safety first: Never position a spa or any other type of pool near overhead cables or power lines.

Make sure that if the spa is to be positioned near a slope, dip, and trough or below ground level, there is adequate drainage for any ground water to run off. In this instance we recommend a land drain around the four sides of the spa. Damage caused by flooding is not covered under warranty.

If you are building a deck around the spa, sinking it slightly, or placing it against a wall, ensure easy access is provided to the service panels.

You will receive an equipment layout for the model of spa you have purchased showing access required.

You must ensure that it is possible to drain the spa and move it to gain access to the other three sides if next to a wall or other object.

*Proper planning will enhance the enjoyment of your spa experience and protect your privacy.*

**Do you have a view to admire from the spa?**

**If so consider how the spa can be best rotated so the seating faces the view without obstructing the service panel.**

Do you need quick and easy access? If so, placing spas close to the house or changing room is ideal.
